EXAMINER'S COMMENT

Applicants' amendment filed June 8, 2004 has been received and placed in the file. The amendment placed the claims in condition for allowance by including allowable subject matter in independent form.

REASONS FOR ALLOWANCE

The art of record closest to the claims lack teaching of a clip applier having a distal pushing force of at least 500 grams being provided at the distal end of an advancing element within the outer tubular member. Hooven, the closest prior art of record fails to teach or suggest the particulars of the distal pushing force of at least 500 grams at said distal end of said advancing element. Further, the prior art fail to teach or suggest a flexible surgical device having a flexible outer tubular member having proximal and distal ends; a flexible advancing element extending through the tubular member and having proximal and distal ends; an end effector assembly at said distal end of said tubular member; and at least one control wire extending through a tubular member; the control wire proximal end coupled to a handle such that operation of said handle causes relative proximal and distal movement of the control wire relative to the outer tubular member; and the distal end coupled to the end effector assembly such that movement of the control wire relative to the outer tubular member causes operation of the end effector.

For these reasons, the claims are allowable over the art of record.
